Q2(a) (i) Return of security X under Arbitrage pricing theory (APT)

⇒ 6% + 1.2(4%) + 0.5(5)

⇒ 13.2%.

Since, the actual expected return is more than return APT, security X is not correctly priced, rather underpriced.

Return of security Y under Arbitrage pricing theory (APT)

⇒ 6% + 0.8(4) + 1.4(5)

= 16.2%.

Since, expected actual return is more than return per APT, security Y is not correctly price, rather overpriced.

2aStep1
2 Marks

DO NOT WRITE ANYTHING HERE

Scanned with OKEN Scanner

(11) Let weight of 'A' be x, then weight of 'B' is (1-x)

Therefore,

$1.2x + 0.8(1-x) = 1.4$

$\Rightarrow 1.2x + 0.8 - 0.8x = 1.4$

$\Rightarrow 0.4x =$

(14) Let amount invested in A = $\frac{x}{100,000}$, then

amount in B is $\frac{100,000 - x}{100,000}$

Hence, $1.2 \times \frac{x}{100,000} + 0.8\frac{(100,000-x)}{100,000} = 1.4$ (for Factor 1)

$\Rightarrow 1.2x + 80,000 - 0.8x = 140,000$

$0.4x = 60,000$

$x = 150,000$

Hence, the amount to be invested in A is 150,000

and the amount to be sold short in B, is 50,000.

2aStep2 4 Marks

Hence, the weights would be A = 1.5, B = -0.5, the same satisfies the criteria given in question for portfolio sensitivity of 1.4 and 0.75 for Factor 1 & Factor 2 respectively.

(c) The Elliot wave theory of Technical Analysis assists in predicting stock market prices. Further it is based on historical data of 75 years wrt movement of share prices.

It helps to predict when the price of stock will rise and when it will tend to fall.

Elliot wave theory talks about two share price movements:

1) Impulsive wave
2) Re Reactive waves (corrective waves)

The following chart illustrates Elliot wave theory wherein:

Answer 3)

a) (i) Evaluation of cheaper option :-

1) India

Borrowing = € 40,00,000 × 50%
= € 20,00,000

⇒ Where, 1£ = 75 INR
1€ = 1.2 £ ⇒ 1£ = $\frac{1}{1.2}$ €

⇒ 1€ = 75 × 1.2 = 90 INR

Initial borrowing (INR) = 20,00,000 × 90 = 18,00,00,000

Interest rate ⇒ 18,00,00,000 × $\frac{7}{100}$ × 2

= 324,00,000

total = 18,00,00,000 + 324,00,000 = 21,24,00,000

2) Europe.

Money required = 20,00,000 €

Interest = 20,00,000 × $\frac{5}{100}$ × 2 = 200,000 €

total = 20,00,000 €

DO NOT WRITE ANYTHING HERE
DO NOT WRITE ANYTHING HERE
DO NOT WRITE ANYTHING HERE

Scanned with OKEN Scanner

exchange rate after 1 years between EUR/INR

$\Rightarrow 1\$ = 75 \times \frac{1.07}{1.03} = 77.37$

$\Rightarrow 1 EUR = 1.2 \times \frac{1.03}{1.05} = 1.18$, $\Rightarrow 1\$ = \frac{1}{1.18} €$

$1€ = 73.66$ INR

exchange rate after 2 years between EUR/INR

$1\$ = 77.75 \times \frac{(1.07)^2}{(1.03)^2} = 83.79$

$1€ = 1.2 \times \frac{(1.03)^2}{(1.05)^2} = 1.15$, $1\$ = \frac{1}{1.15} €$

$1€ = 96.59$ INR

INFLOW when loan in EUR

$\Rightarrow \frac{200000}{100,00}(73.66) + \frac{200,000}{100,000} \times 96.59 + 20,00,000 \times 96.59$

$\Rightarrow$ ~~73,72,00,000 EUR/INR~~ (assuming interest are paid annually).

$\Rightarrow$ 21,92,05,000

Scanned with OKEN Scanner

3d) USA

amount required = 20,00,000 €

amount in USD = 20,00,000 € × 1.2 = 24,00,000 $

INTEREST = $24,00,000 \times \frac{3}{100} \times 2 = 144000$

INFLOW of USD loan
= 72000 × 79.37 + 72000 × 83.99 + 24,00,000 × 83.99
= 21,33,37,120
(assuming interest is paid annually)

Hence, the cheapest is to borrow in INR since the net outflow is 21,04,00,600 which is the least.

Hence, the cheapest is to borrow in EUR since the net outflow is 21,22,05,000 which is the least.

[exchange rate: 1 year = $\frac{75(1.07)}{1.03} = 79.37$

2 year $\frac{75(1.07)^2}{(1.03)^2} = 83.99$

(c) Transfer of NPA's through securitisation improves balance sheet health but may involve legalities and valuation challenges like :

1) Accounting

There are difficulties involved in accounting of securitised assets, with no prescribed accounting methodology. Particular risk arise when asset are transferred without recourse.

2) Taxation

There are different view for taxation. Some specialist are of opinion that SPV are taxed in representative capacity while investors are taxed in individual capacity.

3) Poor Inadequate debt market

Inadequate and insufficiently developed debt market also poses problems.

Yr 4 = 0.613
Yr 5 = 0.543

Intrinsic value = 777.68

(11) Given current price of 850, the stock is overvalued.

for overage deviation = $\frac{777.68 - 850}{777.68}$

= -9.31%

(c) Sustainable growth rate is maximum growth rate of firm without borrowing.

If it seeks to grow further it needs to obtain additional funding.

Given the fact the company has maximised its borrowing and wants to grow further, it needs to change and re-evaluate its internal organisation.

Alternate to achieve growth

1) Increase profitability via sales
2) Restructure operations.
3) optimum use of available resources
4) Implement cost cutting measures
